Education

Parul University

B.Tech in Computer Science

Sep. 2022 – May 2026

Vadodara, Gujarat

Experience

CodSoft

May 2025 – June 2025

Python full stack Intern

Remote

- Built and deployed web applications using Django and Flask frameworks, implementing both frontend interfaces and backend logic.
- Developed RESTful APIs for seamless data exchange between frontend and backend components.
- Worked on database models and queries using Django ORM and integrated PostgreSQL for persistent data storage.
- Gained practical exposure to machine learning concepts by integrating basic ML models into web applications for data-driven features.
- Strengthened skills in full stack development including Python, HTML, CSS, JavaScript, and API development.

Projects

resumeX – AI Resume Parser | Python, spaCy, Regex, Django, React

GitHub

- Developed a full-stack **AI-powered resume parser** extracting entities such as name, education, experience, and skills from PDF resumes, demonstrating **AI-native development** skills.
- Implemented **spaCy NER** and **custom regex pipelines** to maximize extraction accuracy and handle complex resume formats.
- Engineered a **resume scoring system** evaluating keyword relevance, skill match, and structure, producing a score out of 100 to aid data-driven decision-making.
- Designed and deployed a **Django backend** with an **interactive React frontend** for real-time parsing, highlighting **rapid prototyping and full-stack AI integration**.

College Prediction for TS EAMCET | Python, Pandas, Scikit-learn, Streamlit

Live

- Developed an **AI-driven predictive system** to recommend suitable colleges based on TS EAMCET rank and category, demonstrating **ML pipeline development** skills.
- Processed and analyzed 50,000+ official cutoff records to train **classification and clustering models**, enabling **data-driven decision-making**.
- Deployed a **Streamlit frontend** for interactive predictions, highlighting **rapid prototyping and AI-native application development**.

Twitter Sentiment Analysis using NLP | Python, Django, NLTK, Scikit-learn

Live

- Built an **AI-powered system** classifying 10,000+ tweets into positive, negative, or neutral sentiments using NLP.
- Implemented preprocessing with **tokenization, stop-words removal, and TF-IDF** for accurate features.
- Optimized **Logistic Regression and Naive Bayes models** achieving 80%+ accuracy.
- Deployed via Django with a responsive web interface, demonstrating **AI-native deployment and rapid prototyping**.

Technical Skills

Languages: Python, Java, C, SQL, JavaScript, HTML/CSS

AI/ML & NLP: scikit-learn, pandas, NumPy, NLTK, spaCy, TF-IDF, Logistic Regression, Naive Bayes, ML pipelines, LLM prototyping, RAG architectures

Frameworks & Tools: Django, Flask, Streamlit, React, REST APIs, Git/GitHub, Jenkins, Linux, Google Cloud Platform

Developer Skills: Rapid prototyping, AI-native development, Full-stack development, AI experimentation, Data analysis, Visualization (matplotlib)

Certifications and Achievements

Apple Certified Teacher

Apple Inc.

Postman Student Expert Certification

Postman Academy

Data Visualization Certificate

Forage

Felicity 2025 Hackathon Participant

IIT Hyderabad

Solved 200+ DSA Problems

LeetCode, GeeksforGeeks, HackerRank
